## DETAILED ACTION

### *Specification*

1. The abstract of the disclosure is objected to because the abstract should be in narrative form and generally limited to a single paragraph on a separate sheet limited to 150 words. Correction is required. See 37CFR 1.72.
2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Spira et al. (US 2002/0035495 A1).

Regarding claims 1-3, Spira et al. teach a system for servicing and maintaining thermal equipment, water treatment equipment and the like, established between one or more facility sites that have thermal equipment and/or water treatment equipment and that conclude a servicing and maintenance contract regarding the thermal equipment and/or water treatment equipment, and a management center that performs servicing and maintenance of the thermal equipment and/or water treatment equipment in the corresponding facility site ([0050]), comprising a communication line for connecting the facility site and the management center ([0007]-[0008]), the management center (Fig.13) having a database for storing various information on the thermal equipment and/or water treatment equipment and a control unit for reading requested information from a database in response to a request of the facility site to provide the various information on the thermal equipment and/or water treatment equipment ([0073]), and transmitting the requested information read from the database to the facility site through the communication line, the facility site having an information retrieval unit that is capable of requesting the control unit to provide the various information through the communication line, receiving the requested information transmitted from the control unit through the communication line ([0099], [105], [168]-[172]).
